

JoomION ScrollBox

Module manual · Scrolling ticker text with custom text or article content, four scroll directions (Joomla 5/6)

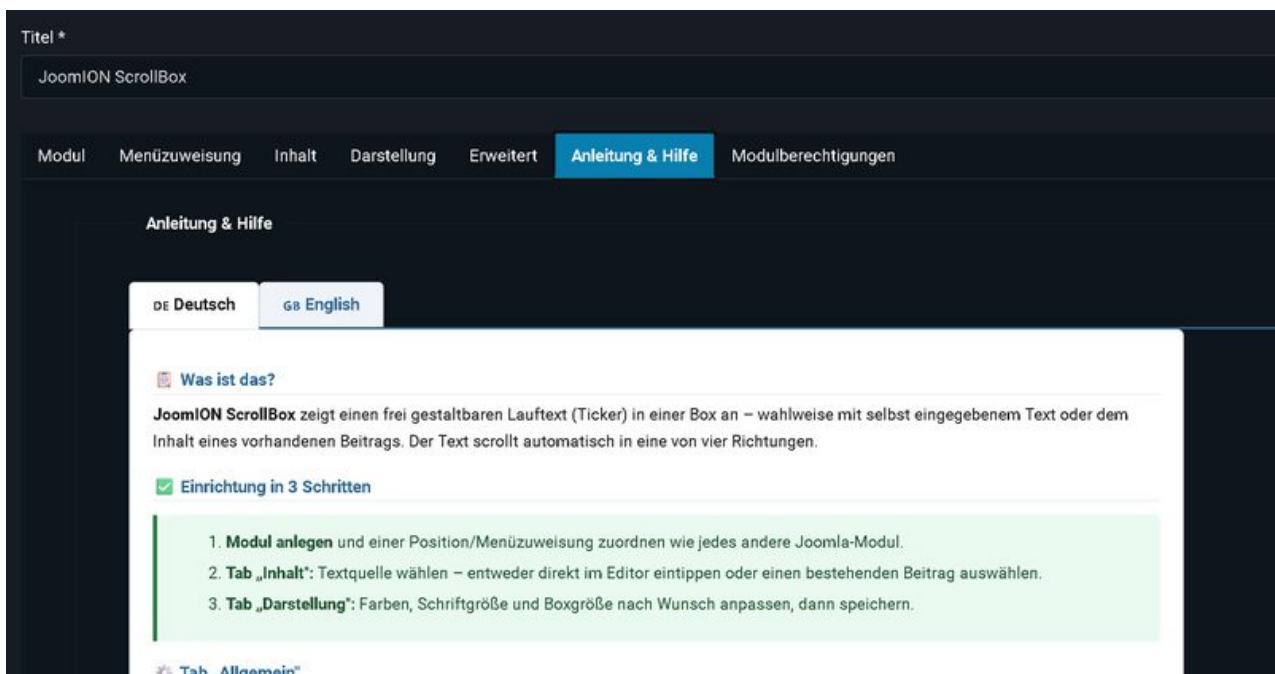

1. Overview

The **JoomION ScrollBox** module displays an automatically scrolling ticker text in a freely styleable box. The content source is either custom text you enter, or the content of an existing Joomla article. The text scrolls in one of four directions (left/right/up/down) at a configurable speed.

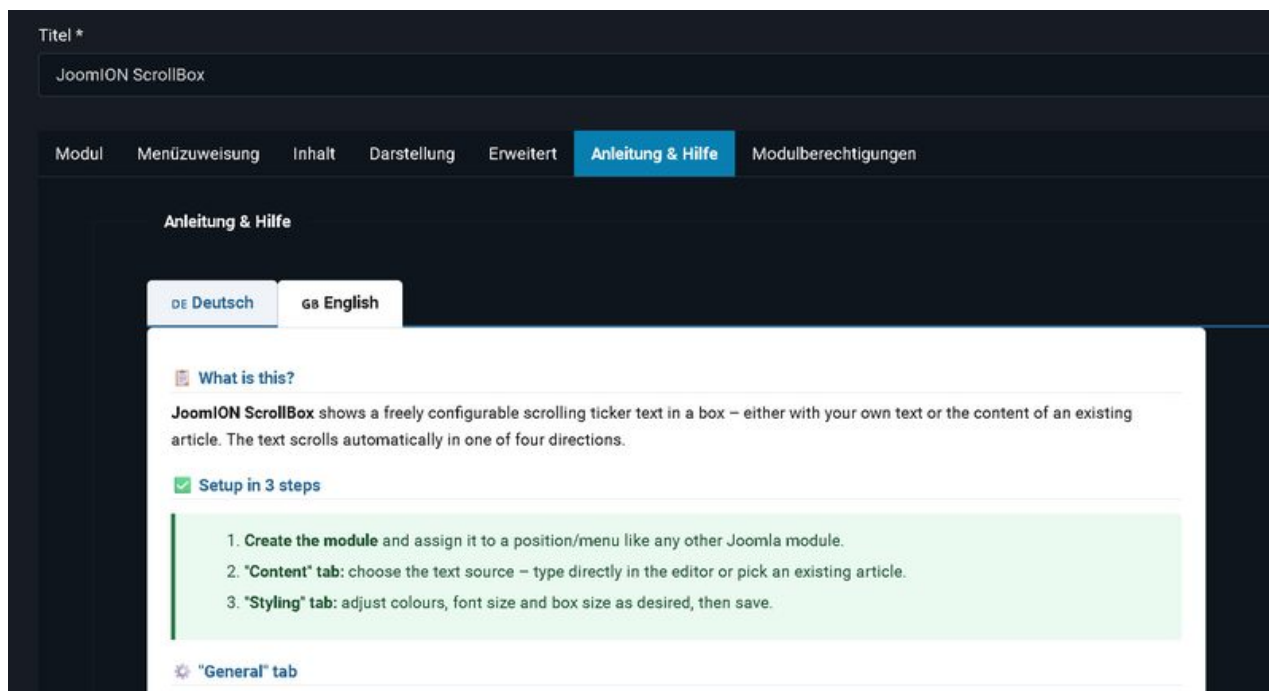

2. Installation

- 1 Upload the package `mod_joomionscrollbox_vX.zip` via **System** → **Install**.
- 2 Under **Content** → **Site Modules** create a module "**JoomION ScrollBox**", assign a position, and publish it.
- 3 On the **Content** tab choose the text source, then adjust the look on the **Styling** tab.

The **Guide & Help** tab provides a detailed bilingual (DE/EN) overview directly inside the module.

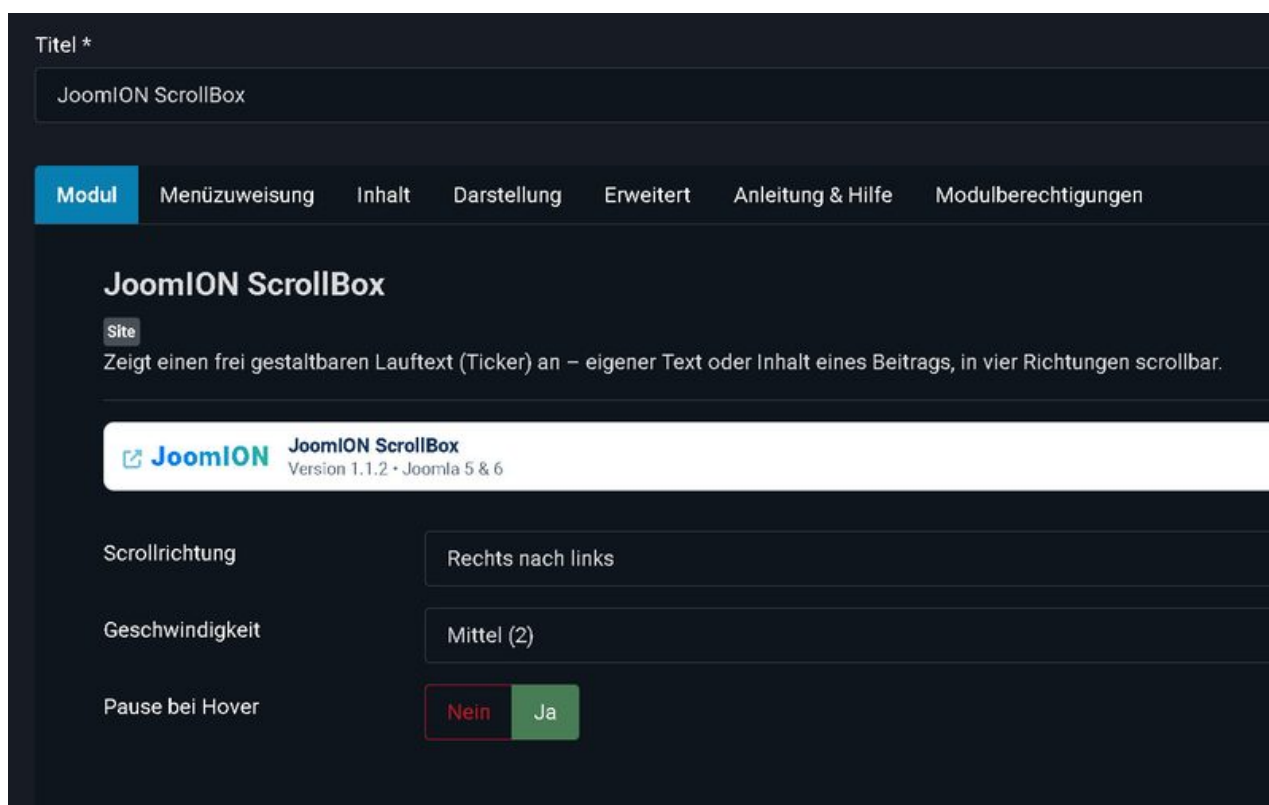

The "Guide & Help" tab – German

The "Guide & Help" tab – switched to English

3. Options

- **General:** scroll direction (left/right/up/down), speed (10 levels), pause on hover/touch.
- **Content:** content source (custom editor text or an existing Joomla article), optional character limit, strip HTML tags.
- **Styling:** text colour, font size, font weight, box width/height, padding/margin, border (width, colour, corner radius), background colour. With horizontal scrolling (left/right) the text is automatically centred vertically in the box.
- **Advanced:** alternative layout, module class suffix, additional CSS for advanced users.

The "Styling" tab with all style options

For the article source, only **published** articles are shown that are **authorised** for the visitor and whose **publish window** is currently valid.

4. Security

The module contains **no malicious code**: `_JEXEC` protection and `declare(strict_types=1)` in every file, namespaced Joomla 5/6 API. All module parameters (colours, length values, direction, speed) are validated server-side against fixed value lists or regex patterns – a tampered value cannot break out of the style attribute. The database query for article content uses only **bound parameters** (no SQL injection possible). A full security audit report is available as a separate PDF.

5. Licence, updates & donations

Free software (GPL v2+). The module is free of charge and requires **no licence key** and no registration. **No update guarantee, no guaranteed support – use at your own risk.** Support requests are welcome at info@joomion.de.

Updates arrive normally through the **native Joomla updater** (System → Update → Extensions) – without any licence check.

If this module helps you, a **voluntary donation** on joomion.de is much appreciated. Thank you!
